

Quality Assurance — Guilds System

Overview

As part of the Quality Assurance (QA) team, we were responsible for testing the **Guilds System** to ensure that its features were functional, reliable, and aligned with the system requirements before deployment.

How We Performed QA

1. Requirement Review

We first reviewed the expected features and requirements of the Guilds System to understand how each function should behave and what the expected results were.

2. Functional Testing

We tested the major features of the Guilds System, including:

- Creating and managing guilds
- Joining and leaving guilds
- Viewing guild information
- Managing guild members
- Updating guild details
- Checking user permissions and access
- Verifying buttons, forms, and navigation

3. Test Case Execution

For each feature, we created and executed test cases containing:

- Test scenario
- Preconditions
- Steps to reproduce
- Expected result
- Actual result
- Test status (Pass/Fail)

4. Negative Testing

We also tested invalid inputs and unexpected user actions to determine whether the system could properly handle errors. Examples included:

- Submitting incomplete forms
- Entering invalid information
- Attempting actions without the required permissions
- Trying to access restricted features

5. UI and Usability Testing

We checked the interface for visual and usability issues, including:

- Button functionality
- Layout consistency
- Text and labels
- Form behavior
- Navigation
- Responsiveness

6. Bug Identification and Reporting

When we encountered an issue, we documented the bug with relevant details such as the steps to reproduce it, expected behavior, actual behavior, and supporting screenshots when necessary.

7. Retesting and Regression Testing

After developers fixed reported issues, we retested the affected features to verify that the bugs were resolved. We also checked related functionality to make sure that the fixes did not introduce new problems.

QA Outcome

Through systematic testing, documentation, bug reporting, and retesting, we helped improve the reliability and usability of the Guilds System and ensured that its core features were functioning as expected before release.

My Role

Quality Assurance / QA Tester

- Executed functional and negative test cases
- Identified and documented bugs
- Verified expected vs. actual behavior
- Performed retesting after fixes
- Conducted regression checks
- Collaborated with developers to communicate and resolve issues
- Helped ensure the Guilds System met its functional requirements

Sample Outputs:

QA Finding: Club Filter Not Working for AY 2026–2027

Issue:

The **Academic Year filter** in the Clubs section is not functioning correctly.

Steps to Reproduce:

1. Navigate to the **Clubs** section.
2. Open the **Academic Year** filter.
3. Select **2026–2027**.

Expected Result:

Clubs associated with the **2026–2027 academic year** should be displayed.

Actual Result:

No clubs are displayed after selecting **2026–2027**, even though clubs are expected to be available for that academic year.

Status: ❌ Failed

Severity: Medium

QA Recommendation:

Check the filtering logic and verify that the **2026–2027 academic year value in the frontend matches the corresponding data stored in the backend/database.**

Issue:

Expected Result:

Actual Result:

Status:  Failed

QA Recommendation:

Remove or restrict the **Delete Announcement** functionality. If deletion is required for administrators, implement proper role-based access control and confirmation before deletion.

QA Finding: Missing Hyphen in Contact Number Format

Issue:

The **Contact Number (CP)** field does not display the required hyphen (-) in the phone number format.

Expected Result:

Contact numbers should follow the required format with a hyphen (e.g., **0917-123-4567**).

Actual Result:

The contact number is displayed without the required hyphen.

Status: ❌ Failed

Severity: Low

QA Recommendation:

Update the contact number formatting or input validation to automatically include the required hyphen format.
